FEATURED PROJECT	1
GRANTS AND LOANS	2
JOINS US AT THE AWC CONFERENCE	2

Featured Project: Hunters Water System

Belsby Engineering has been selected as the project engineer to design water system improvements for the Hunters Water District. The purpose of the improvements is to remedy the elevated arsenic levels present in the community's water system.

In addition to engineering design and project management, Belsby Engineering has led the District in obtaining funding for the project. Our efforts have enabled a joint funding effort between the Public Works Trust Fund, the Community Development Block Grant program, and the Drinking Water State Revolving Fund to perform preliminary planning and investigation activities as well as final project design and construction. We have contributed grant writing and follow-up project administration and guidance to assist the District in procuring all of the awarded funding, including a substantial portion appropriated through the Recovery Act.

Preliminary project activities are well-underway and the rapid design-build schedule for the project calls for construction to begin as early as February, 2010. The million-dollar project will remedy the long-standing public health threat to both the residents within the District as well as the students attending the local K-12 public school. We are very excited to be a part of such an important project for the region and are proud to have been selected as the project consultant for so vital a task.

Grants and Loans

RECOVERY.GOV

The Recovery Act, passed as part of President Obama's stimulus plan to jump start the economy, has opened up a wide range of previously nonexistent funding opportunities throughout the State of Washington.

The Act requires the stimulus funds to be dispersed using unique channels outside of the grant and loan programs currently available to communities seeking project funding for infrastructure improvements. Programs which have previously only offered loan programs, such as the Drinking Water State Revolving Fund, have developed a special grant funded solely through stimulus funding, and those programs which have offered grants in the past are developing new grant specifications to meet these Federal guidelines.

Belsby Engineering is watching the progress of these opportunities as further updates become available. Give us a call or stop by to discuss how your community can benefit.

Join Us at the AWC 2009 Annual Conference

The Association of Washington Cities 2009 Annual Conference is being held at the Spokane Convention Center on June 24-26, 2009. Belsby Engineering will be one of the exhibitors where we will be showcasing our recent projects and upcoming endeavors. If you plan to attend the conference, we hope you will take the time to visit our booth and chat with our staff. We plan to have our designers in attendance and it promises to be a great opportunity for municipal leaders to learn about the services our organization can offer.
